

LABORATORIO DE FABRICACIÓN DIGITAL Y DISEÑO PARAMÉTRICO
FACULTAD DE ARQUITECTURA E INGENIERÍA

2° ENCUENTRO DE EXPERIENCIAS INSTRUMENTALES

Patrones de Piel como
Estructura

Arquitectura Digital, biología
y arquitectura genética.

Ponentes:

DR. PABLO BAQUERO

Arquitecto, artista y diseñador su mayor interés está enfocado en sistemas naturales y su simulación computacional que conducen el futuro de la arquitecturacomputacional. Actualmente profesor del Máster Universitario de Arquitectura Biodigitalal, desde 2016 en UIC Barcelona, en workshops particulares en temas relacionados con biología computacional y campos de investigación sobre los sistemas de modelado de la biología y el aprendizaje de maquina. Además, sus intereses están en el área de investigación sobre proyectos que avanzan la brecha entre los últimos métodos de materialización, la emergencia de formas de la naturaleza por medios de simulación de fenomenos fisicos, y con esto acercarse a construir el futuro de la arquitectura.

MODULO 04

5 DE OCTUBRE

2020

11:00 - 12:00

Keywords: fabrication, cnc, lasercut, 3d printing, stripes.

“Los cambios más convincentes en el diseño ocurren cuando las nuevas tecnologías y capacidades de fabricación están disponibles e interpretadas de nuevas maneras.”

Barkow Leibinger

Greek Network of Digital Fabrication
Δίκτυο Ψηφιακών Μέσων Κατασκευής/

Our group is an initiative of passionate architects, engineers, partners and collaborators from Europe, North and South America. Our goal is to provide effective connection between design and production and enable the construction of projects into scale 1:1. With the use of contemporary digital fabrication techniques, as the case of CNC (computer numerical control), through our workshops, participants naturally come to understand procedures generated from CAD/CAM from the beginning to the most advanced in terms of digital tools and manufacturing techniques. Our goal is to establish a new kind of connection between academic research, professionals and the building industry which will revolutionize the way we design and construct.

Installation for Bar
LaDoze,
june 2013-june 2017

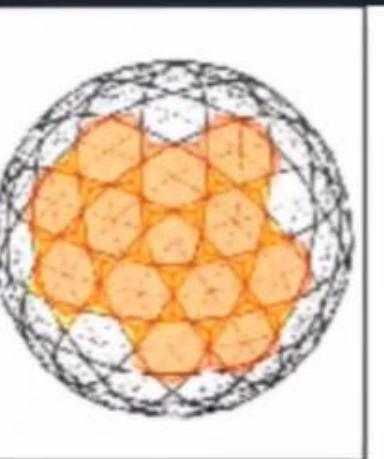

Tipologías de diseño en base al metodo de fabricacion.

- 1. Estructuras Metálicas**
- 2. Patrones componenciales.**
- 3. Intersección de material.**
- 4. Topologías de piel en franjas**
- 5. Tensión en Impresión 3d**

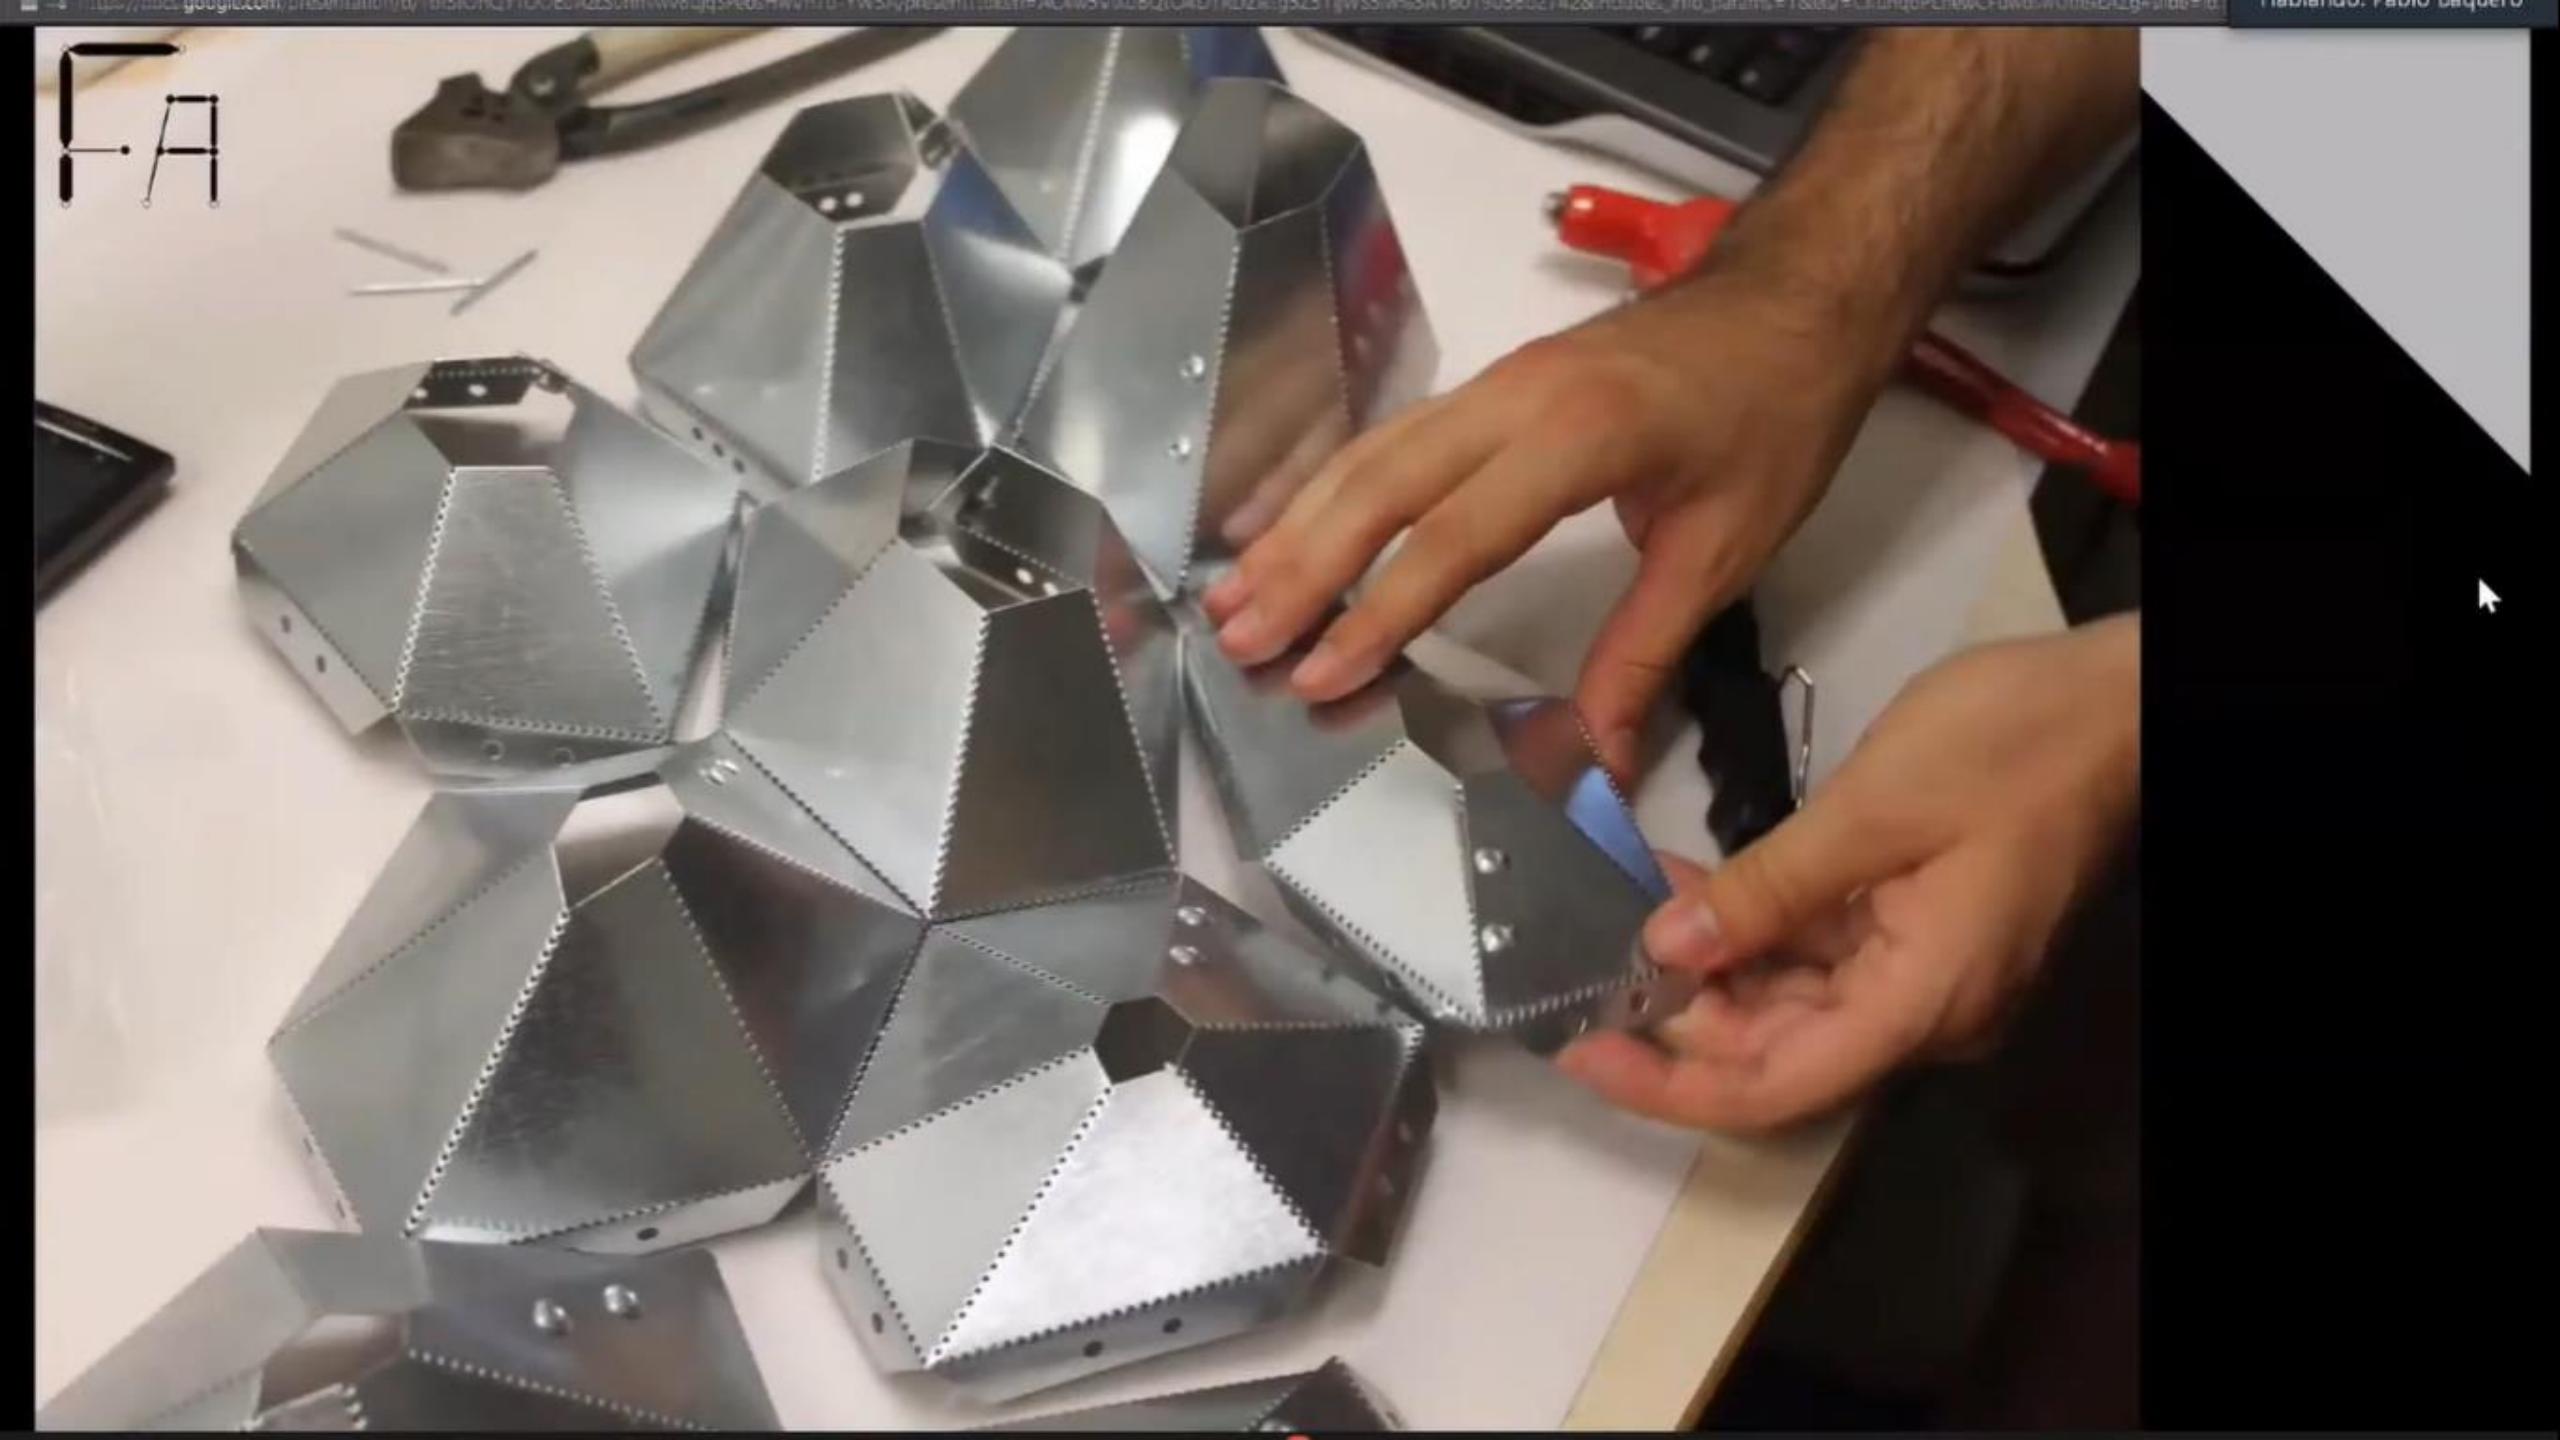

Estructuras Metalicas

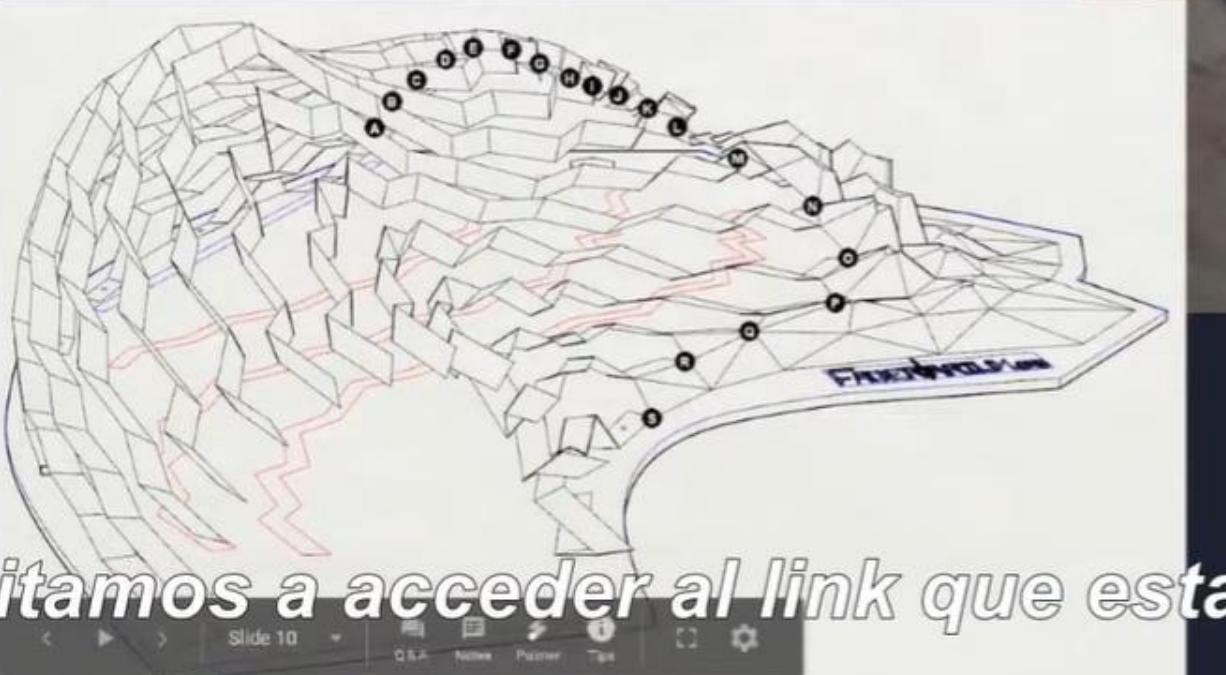

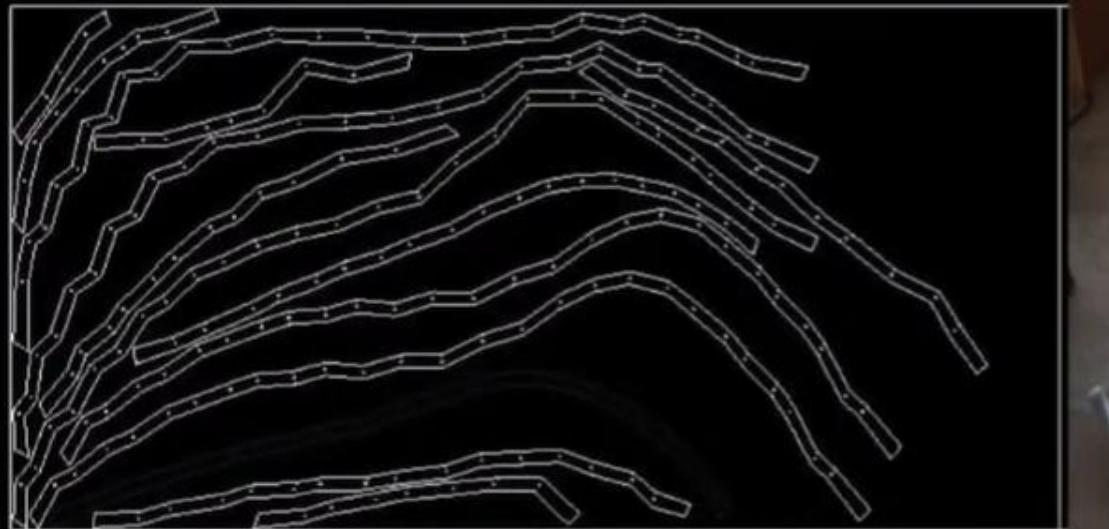

Eden Project Bio Domes
Grimshaw Architects
2001. St. Austell, Cornwall (UK).
From the grid configuration through the bubble clusters to the final built solution.

Patrones Componenciales

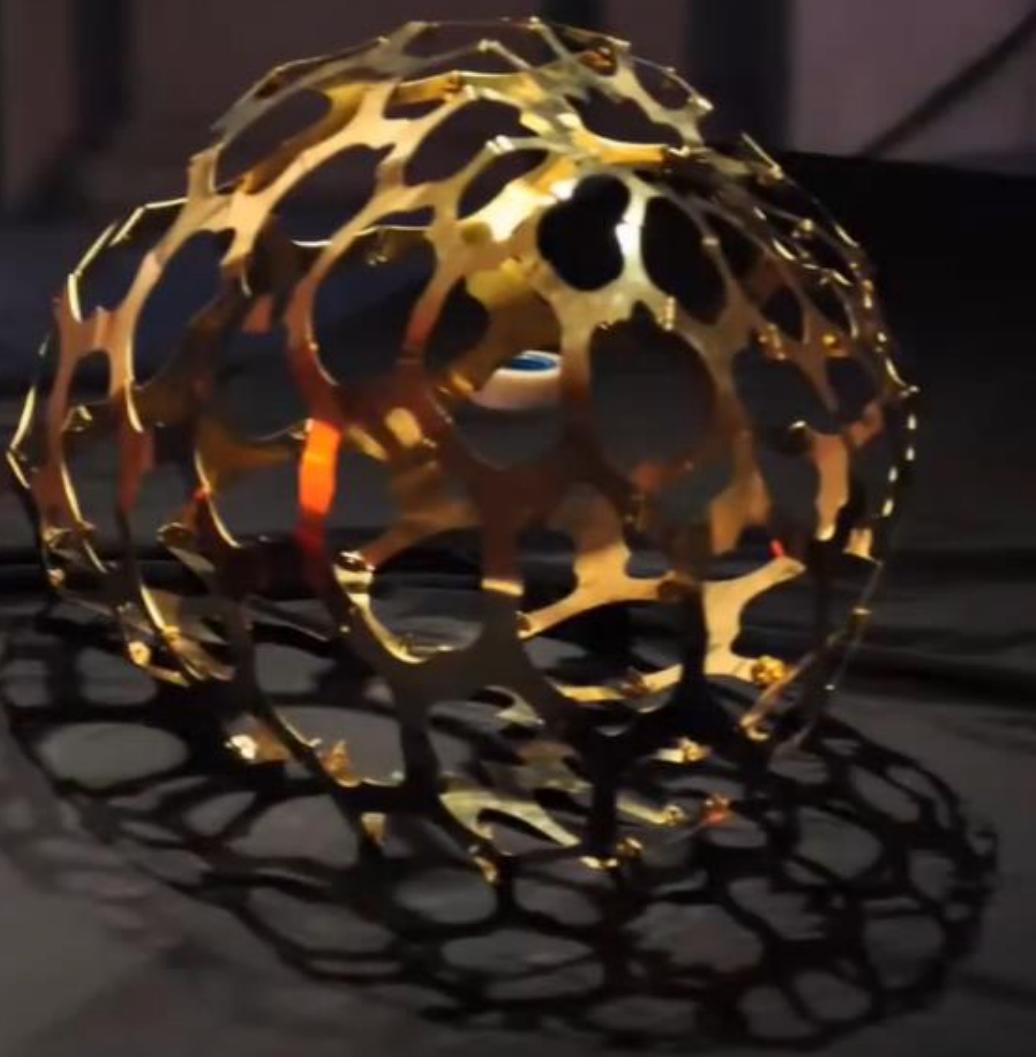

ArboSkin Pavilion made by ITKE Made From a Bioplastic Containing Over 90 Percent Renewable Materials, The spiky Modules Used to Build This Curving Pavilion in Stuttgart, Germany

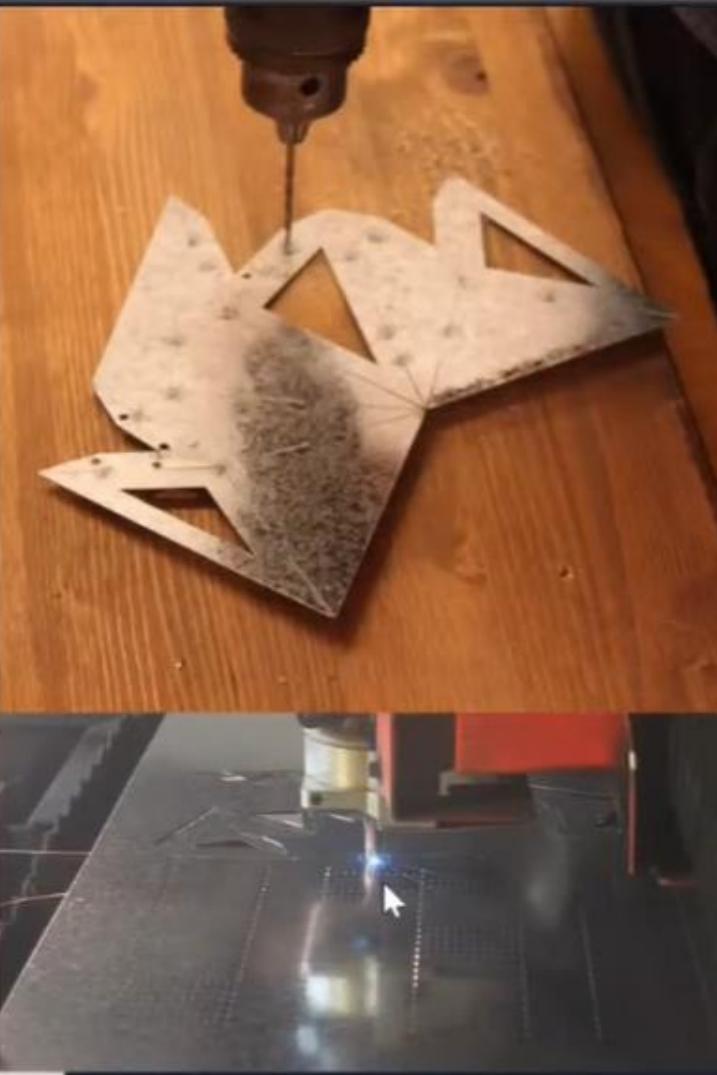

Al Bahr Towers by AHR, Abu Dhabi, United Arab Emirates

Clad with a unique dynamic shading system meant to reduce the buildings' solar gain by 50%, AHR's Al Bahr Towers manage to test the limits of responsive design. The façade features elements inspired by the traditional Islamic lattice shading system, Mashrabiya, which is completely computerized to adjust to changing weather conditions.

Design and Construct data tree relations

Intersecciones de Material

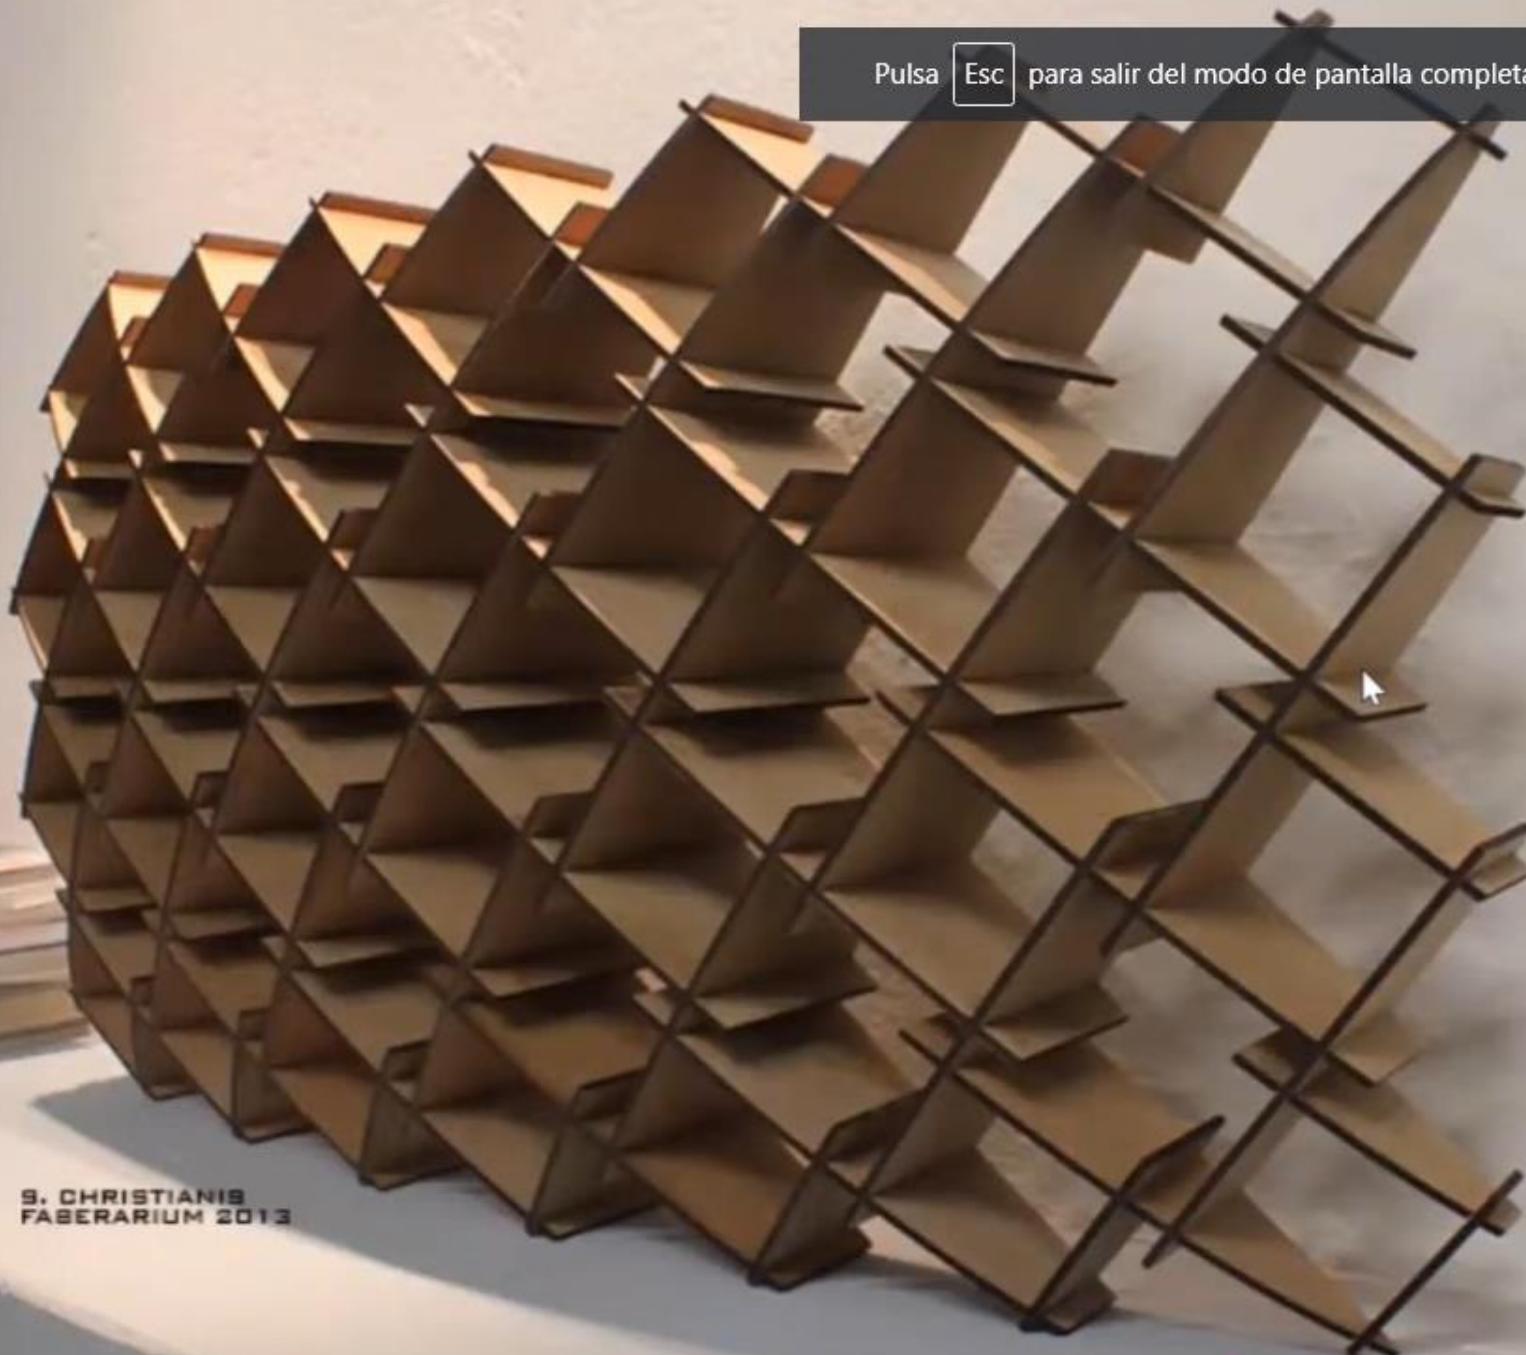

Designed by the German architect Jürgen Mayer and completed in April 2011. It has dimensions of 150 by 70 metres and an approximate height of and claims to be the largest wooden structure in the world,

DESIGN BY MARC FORNES / THEVERYMANY

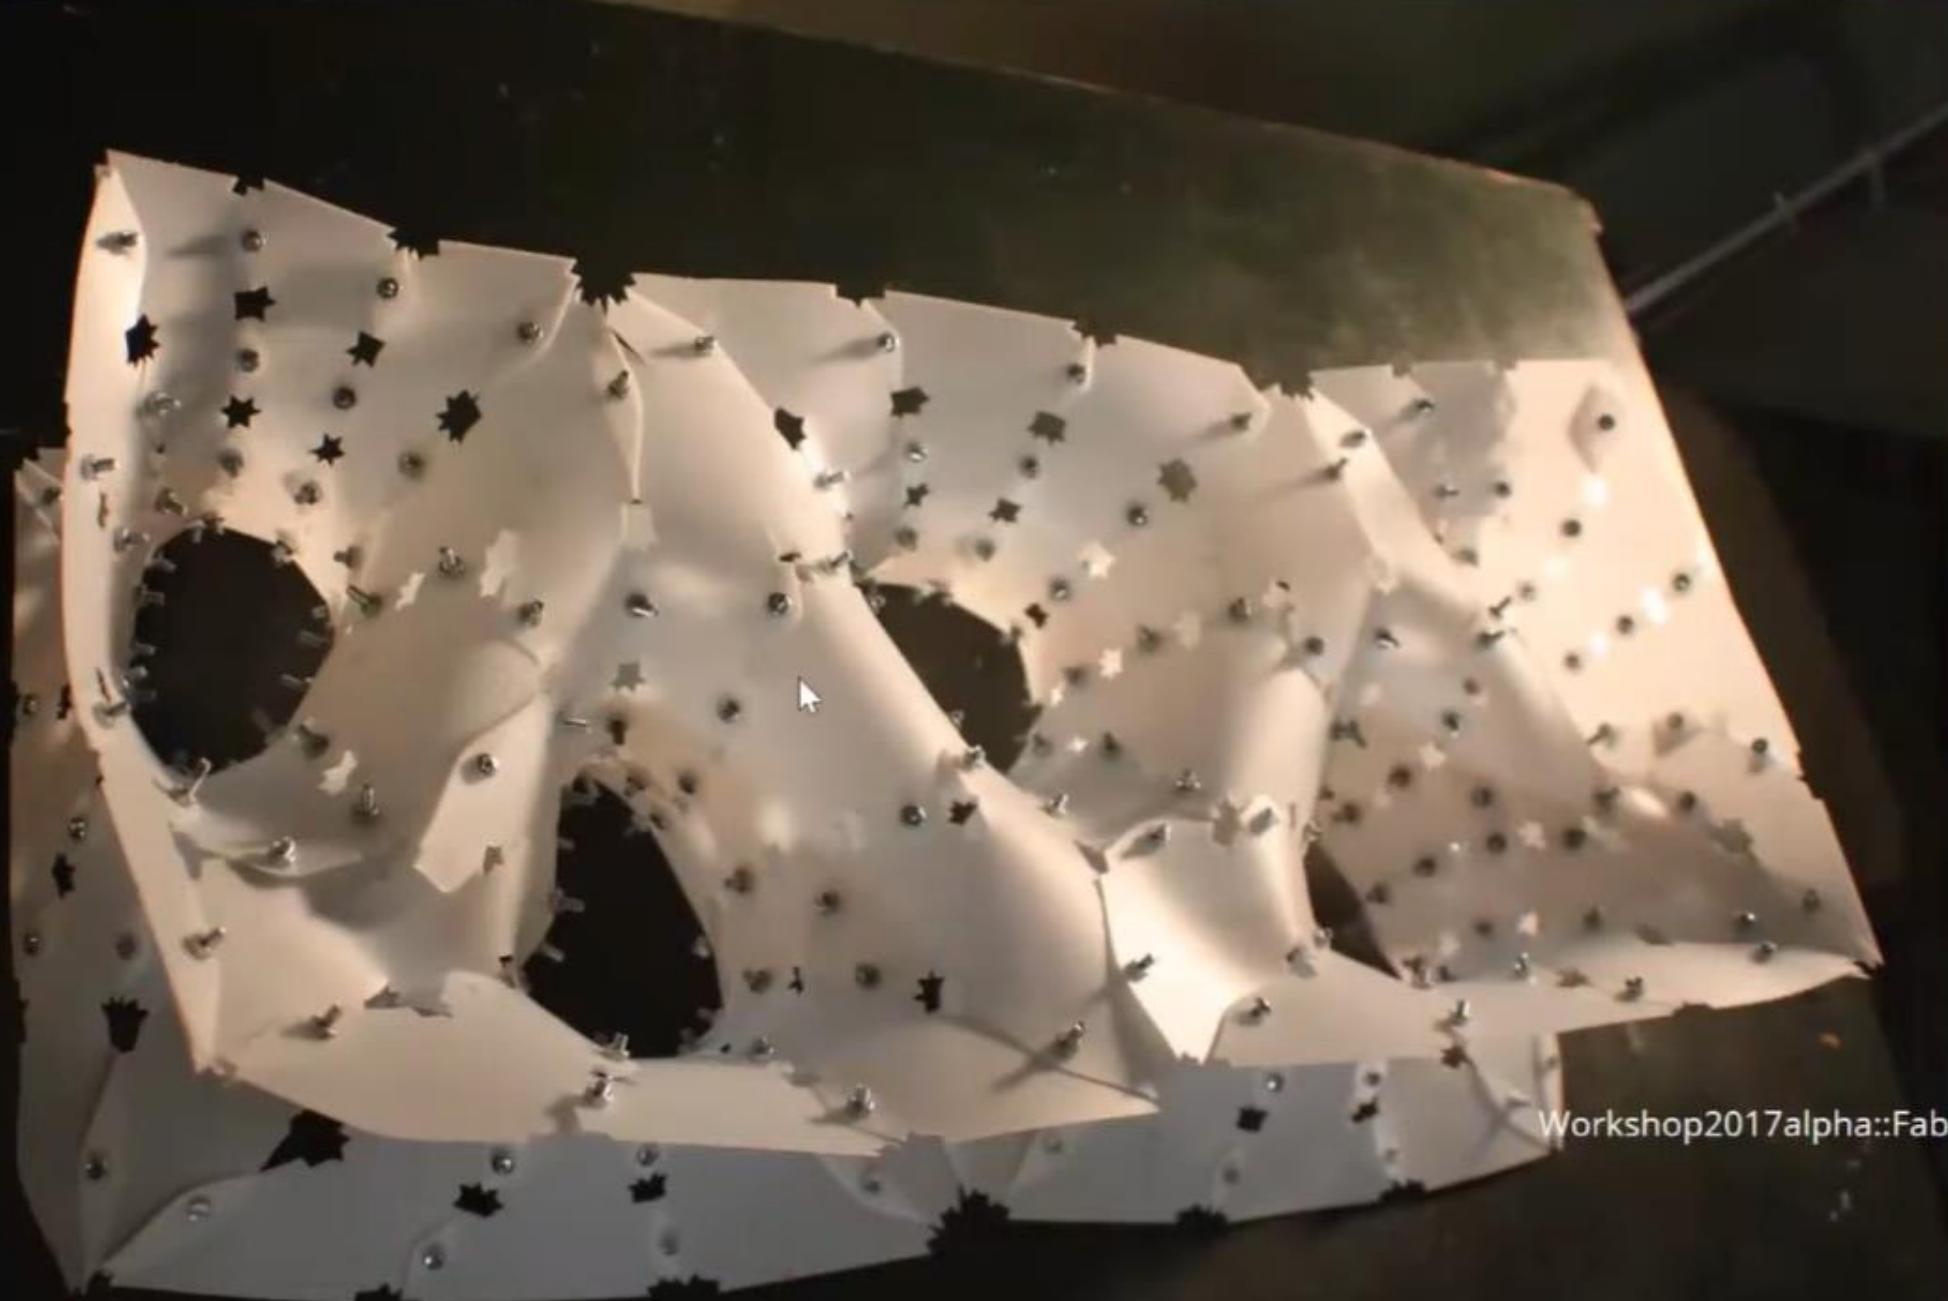

Minima | Maxima is the latest Structural Stripes "Crawling Assembly" from MARC FORNES / THEVERYMANY. This permanent installation provides a moment of contemplation amid the busy grounds of World Expo 2017 in Astana, Kazakhstan.
